Information Systems & Telecommunication Services

Kyocera operates other businesses in information and communications technology (ICT); telecommunications engineering; environment and energy engineering; and management consulting. We can help implement and operate four major types of systems: information platforms, communications infrastructure, harmonized economy and ecology infrastructures, and enterprise management platforms.

Information and Communications Technology

We offer ICT solutions for local information systems, enterprise resource planning (ERP), security, cloud systems, low-cost IoT services and digital marketing.

Telecommunications Engineering

We offer wireless infrastructure construction, operation and maintenance, and transmission optimization for telecommunications carriers; and construction support for core network base stations and services.

Environment and Energy Engineering

We provide one-stop service for design, procurement, installation, operation and maintenance of utility-scale solar power plants and other public and industrial solar power systems, with an extensive track record of design and installation on both land and water.

Management Consulting

We provide consulting services for the implementation of Kyocera's unique Amoeba Management System, helping customers to introduce the system, providing operational support, and facilitating the operation of related information systems.

IoT Modules for Our Ever-Connected World

The Internet of Things (IoT) turns everyday items into smart devices by connecting them to the Internet and each other. Kyocera's high-quality communications modules contribute to the rapidly developing IoT ecosystem.
